## DETAILED ACTION

### *Opening Remarks*

1. The indicated allowability of some claims is withdrawn in view of the newly discovered reference. Rejections based on the newly cited reference(s) follow. Since Applicant's Amendment did not necessitate the new grounds of rejection, this Office Action is NOT made Final.

2.

3.

4. ***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Limitation of claim 7 amounts to double inclusion whereby it is not clear if the same structure is being recited twice or additional structure is being claimed.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3676

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 7, 9-11, 17, and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Pat. No. 5,123,548 to Milne.

Milne '548 teaches Applicant's claim limitations including a "generally wedge shaped stop member" – 22 and including the pointed end, a "holder unit" – including 12,20, a "tether member" – 43, "means for attaching" – the adhesive and or screw illustrated and described.

While admittedly, the writing instrument is not described for use in wedging a door, it is the examiner's position that it is inherently capable of such use with doors having an appropriate gap at the side or more preferable, the bottom. Since the claimed invention does not include the door in combination as part of the invention, there is no requirement that an anticipatory reference teach such combination. In that respect, preamble recitation of "door stop" amounts to little more than a statement of intended use. It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987). It has been held that a preamble is denied the effect of a limitation where the claim is drawn to a structure and the portion of the claim following the preamble is a self-contained description of the structure not depending for completeness upon the introductory clause. *Kropa v. Robie*, 88 USPQ 478 (CCPA 1951). The law of anticipation requires that a distinction be made

Art Unit: 3676

between the invention described or taught and the invention claimed. It does not require that the reference "teach" what the subject patent teaches. Assuming that a reference is properly "prior art," it is only necessary that the claims under consideration "read on" something disclosed in the reference, i.e., all limitations of the claim are found in the reference, or "fully met" by it. *Kalman v. Kimberly-Clark Corp.*, 218 USPQ 789. Claims in a pending application should be given their broadest reasonable interpretation. *In re Pearson*, 181 USPQ 641 (CCPA 1974).

As regards claims 9 and 10, opening in part 12 (for receiving part 20) reads on "hollow receptacle member" and part 20 reads on "bumper member". It's noted that "deformable resilient material" is broad since even materials such as steel are *capable of being deformed* and are inherently resilient since it is capable of returning to its original shape after deformation in its elastic range. It has been held that the recitation that an element is "capable of" performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

Opening in part 12 for receiving part 50 reads on "hollow receptacle member" whereby reference teaches (2).

***Allowable Subject Matter***

3. Claims 12 and 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

4. Applicant's arguments with respect to the claims rejected hereinabove have been considered but are moot in view of the new ground(s) of rejection.
